of 5 stars Solution Get an outside unit and pay big bucks to the installer. 2. Vent is a pain Are you kidding me. A 10 year old can work around fitment issues. Tips Dont fall in love too easyP Seriously Tips Dont keep on moving the damn thing, let it stay in one corner. When leaving the house for an extended period, unplug it.Please try again later. Please try again later. Milwaukee Wayne 1.0 out of 5 stars This summer, the remote control began to malfunction. Unfortunately, most features of the product can only be controlled via the remote control.Please try again later. Please try again later. Denise 3.0 out of 5 stars I do have central air but it does not cool the second floor as well as I would like.<http://atcotourismtravel.com/userfiles/carrier-58rav-manual.xml>

This product was to assist my central, and although I find it to be adequate it was yet to be able to reach the desired temp, regardless of how long it is on.Please try again later. Please try again later. Bman 5.0 out of 5 stars I have it in the bedroom and at night this thing will chill you out. During the day I work nights we get full sun and it still keeps you about 73 deg. I use it in conjunction with old central air unit that will keep downstairs nice but once you get above the first floor good luck. This runs almost 24 hours a day during 7 months and all you have to do is vacuum the back cooling fins and vacuum the front filter slides out. You never have to drain I do after winter sets in. I liked ours so much I bought a second for the 3rd floor. As far as noise.you know its there but like anything else you get used to it and can tune it out. The setup on these is considerably easier also open window, add insert, duct tape insert into window and youre ready to rock. Another bad is that if you loose the remote or the batteries go over 2yrs and still good you cant control the unit without it temp, fan speed, mode, timer.Please try again later. Please try again later. You can finds the drain plug on the rear of the unit just above floor level. It can either be drained into a low sided bowl or pan capable of holding 1 quart of water.Hope this helped you and thanks for choosing FixYa. For both central home air conditioner or window air conditioner,If the unit uses 220 volt power be sure that the proper voltage is A voltage meter can be For window air conditioning units the voltage can also be checked before and after the thermostat.This is a fairly common problem. Another place to check is the fan motor voltage. The fan on window air conditioners runs both the indoor blower and the condenser fan. If that motor fails than the compressor This motor can beCentral air conditioners So dont look for high voltage there.

Some units the voltage will be coming from the outdoor unit and others the voltage will be supplied by the indoor air handler or furnace. Most home central air conditioning will be supplied by the indoor air handler or the furnace. If the air conditioner is for cooling only the unit will usually have only two wires going to the condenser unit. Make sure that you have 24 volts across those wires. TheIf your thermostat is The indoor blower is not working, Or the outdoor condenser unit has lost the charge of refrigerant. Finally and worst of all is when you have a complete compressor failure. Overheating or lack of lubrication are usually the main causes of compressor failure. Overheating can be caused by the outdoor coil around the compressor getting clogged with dirt, leaves, or grass. Loss of the refrigerant charge will also cause the compressor to overheat. It is the cool return gas coming back to the compressor that helps to keep it from overheating. AsProper care must always be taken to minimize the release of any gases. A license is also required to handle refrigerants. Make sure that the professional you call has the proper certifications to handle refrigerants properly. Once that ends, the unit should restart. If it doesnt wait until 3 minutes have elapsed, after the stop light goes out and restart the unit. The unit should have reverted back to the original factory settings. If so, reset the controls as you like. I hope this helped you and thanks for choosing FixYa. Login to post If you need further help, reach me via phone at But as of this morning it will not power on. I have tried everything I can think. Blow air through it to clear the blockage.I hope it helps.Answer questions, earn points and help others. It worked perfectly. Im going to give you 5 stars.
